1- SUBURIT: THE BINDING TO THE EXTRACELLULAR DOMAIN OF TWENL LEADS TO HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERFACTS SPECIFICALLY WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD. INTERFACTING PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FADD, ARE RECRUITED TO THER COMPLEX BY THEIR ASSOCIATION WITH TRADD, THIS COMPLEX ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND NF-KARPA B SIGNALING.

1- SUBSCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

1- SIMILARITY: CONTAINS A LA-NGER/TWER-TYPE CYSTEINE-RICH REGION.
                                                                                                                                                                                                                                               EMBL;

THE ADAPTOR MOLECULE FADD
RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
RECRUITS CASPASE-8 TO THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
CC AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
CC AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
CC PETCHNES CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE
SUBSEQUENT CASPASES (ASPARTATE-SPECIFIC CYSTEINE
CC PROTEASES) MEDIATING APOPTOSIS (BY SIMILARITY).
CC -!- SUBUNIT: THE BINDING TO THE EXTRACELLULAR DOMAIN OF TRADIS
CC HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
CC PROVIDE A NOVEL MOLECULAR INTERPACE THAT INTERPACTS SPECIFICALLY
CC WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING
C PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FADD, ARE RECRUITED TO
TOTER COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX
C ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
C NETAPPA B SIGNALING (BY SIMILARITY).
C -!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-!- SUBCELLULAR CONTAINS A LA-NGER/TNER-TYPE CYSTEINE-RICH REGION.

Statistics: Mean 9.143; Variance 4.888; scale 1.870

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

#### ALIGNMENTS

```
RESULT
         DNA encoding TNF binding protein and TNF- receptor - used in the conding TNF binding protein and TNF- receptor - used in the conding TNF binding protein and TNF- receptor - used in the conding TNF binding protein and rechanismsm to TNF action in the conding TNF- protein.

C prinf-ppi5 is one of 30 positives clones in a screened cDNA library from induced TNF-induced fibrosarcoma cells. A TNF-BP had been isolated from the urine of patients with uraemia and probes/primers were constructed from the determined amino acid sequence.

C produce a vector expressing a soluble form of TNF-binding protein, this plasmid was cut with XmmI, amplified by PCR and the amplified DNA cut with Bamil and EcoRI.

C protein cut with Bamil and EcoRI.

C (BRL) cut with Bamil and EcoRI.

C (BRL) cut with the same enzymes to recover pTNF-BP. This was cut with Bamil and EcoRI, and the recovered fragment inserted into pAD-CMYI (Q06283) to give the required plasmid pADTNF-BP.

See also Q06288-Q06285.

These linkers separate the individual moeities by such a distance that each component of the fusion protien is capable of folding into the secondary or tertiary structure required for its biological activity. These fusion proteins may be used in therapy, diagnosis and assays for conditions mediated by TNF or IL-1, particularly in conditions in which both TNF and IL-1 play a causitive role. They may be used to treat cachexia, rheumatoid arthritis, diabetes, multiple scierosis, pulmonary fibrosis and silicosis, cerebral malaria, allograft and xenograft rejection in graft verses host disease, sepsis, septic shock, inflammation, allergies and autoimmune dysfunctions.

Pr - useful in treating cachexia, sepsis and auto immune diseases

PT - useful in treating that of DNA encoding tumour necrosis factor alpha

CC The sequence is that of DNA encoding tumour necrosis factor alpha

CC in lambda gtil using a probe (020974). The DNA also encodes the

CC extracellular domain of human TNF alpha receptor and as such it is

CC useful for treating diseases where TNF alpha is involved as a

CC causative agent, e.g. cachexia, sepsis and autoimmune diseases,

CC specifically rheumatoid arthritis. See also Q20974.

Claim 4; Fig 1; 43pp; English.

This sequence encodes human TNF-alpha 55kD receptor. A placenta cDNA library in gtil was screened with probe 029236. Ten hybridising clones were plaque purified and cDNA size determined by PAGE against an Eco RI digested phage DNA. The inserts of two cDNA clones were then sequenced. The coding region of the majority of the human TNF-alpha 55kD receptor was isolated as an EcoRI fragment encoding 374 amino acids, and cloned into a mammalian cell expression vector, resulting in pTTNFR. A derivative of the TNF-alpha receptor was produced by engineering a termination codon just prior to the transmembrane domain. PCR with primers 029237,8 generated a 300bp restriction fragment which was cloned into pTTNFR, giving pTNFRecd. DNA sequencing confirmed this contained the designed DNA sequence. The TNF-alpha receptor expression plasmids were then transfected into monkey COS-7 cells.

30kD TNF inh
Tumour necro
                                                                                                                                                                 Tumour necrosis factor inhibitor - for suppression of TNF-alpha and -beta, useful as therapeutic agent.

Disclosure; Fig 21; 142pp; English.

The sequence encodes the entire 30 kD TNF inhibitor. The clone from which the sequence was obtd. was isolated from a cDNA library prepd. from RNA form U937 cells treated with PMA/PHA. The whole gene can be inserted into expression vectors for prepn. of TNF inhibitor for use in the treatment of inflammatory and degenerative

Claim 4; Fig 1; 26pp; German.
Claim 4; Fig 1; 26pp; German.
Partial amino acid sequences were determined for the 55 and 75kD
Partial amino acid sequences were determined primers were
synthesised based on these partial sequences. The primers were used
to produce a cDNA fragment for use as aprobe to screen a human
placental CDNA bank constructed in lambda gtll. Positive clones were
identified and sequenced. DNA constructs comprising the TNF-BP coding
sequence may also contain a fragment encoding a human Ig domain.
Recombinant constructs are used to transform cells to confer
                                                                                                                                                                                                                                                                                                                                                                                                                                 mat_pepti

PT New protesse capable of cleaving soluble tumour necrosis factor PT (TNF) receptor - from cell-bound TNF- receptor, useful for PT antagonising deleterious effects of TNF.

PS Disclosure; Fig 1; 40pp; English.

CC This sequence represents human p55 tumour necrosis factor (TNF-R) DNA.

CC Expression of this receptor is regulated by shedding of the extracellular receptor fragment. The p55 TNF-R can be shed in response to different inducing agents, e.g. phorbol myristate acetate (PMA), depending on cell CC type. The only region of the receptor whose structure affects the shedding response is the spacer region (see R75012) in the extracellular commain. This region is located close to a site of cleavage of the colecule, and links the Cys rich module to the transmembrane domain. The spacer region of the encoded protein was used to create the chimeras CC between human p55 TNF-R and murine epidermal growth factor receptor CC (EGF-R) that are represented by R75007-11. This spacer region was subjected to deletion mutations (R75013-25) and substitutions
